How do I reset a Risycor logger?

It may be desirable, for whatever reason, to reset the logger memory. You can do this easily via the Resus PC Dashboard.

## What do I have to do?

- 1. Connect your logger to the computer with a mini-USB / USB cable.
- 2. Open the Resus PC Dashboard (download via www.resus.eu)
- 3. Navigate to 'View sensor info'
- 4. Click on 'Admin functions'
- 5. Click on 'Erase all measurements' and make a backup if desired
- 6. The measurements are then deleted. After the measurements have been deleted, the logger will be restarted.
